

When Fire Threatens  
and Seconds Count,  
Take Control

**First Responders to Fire & Emergency**

In case of emergency.

FireCaddy® adds new capabilities and flexibility to emergency vehicles like pumper trucks, rescue, hazmat and EMS units.

FireCaddy® systems can also transform ordinary vehicles into effective first response units. Law Enforcement, Fire and EMS, Officer, and Supervisor vehicles can all become mobile fire suppression units.

FireCaddy® provides first response fire fighting solutions that can be justified within even the smallest departmental budget.

Imagine the loss that could be mitigated if a first responder had the capability to suppress or contain fire, for extended periods – from a safe distance.

**Ready to go long before outside help can arrive.**

Rural lifestyle? Protect yourself.

You are the first line of offence. Our systems can readily protect agricultural operations, acreages, recreation property and RV owners. Our solutions include utilizing your garden hose with a hand-held HoseCaddy® unit attached, sprinkler zone protection systems, vehicle mounts, wheeled and trailer units that cover your home, machinery and property from potential wildland fires in the field and in the forest.

Marinas, Yachts, Sailboats.

FireCaddy® solutions are ideal for the dockside or on the water. For pleasure craft and commercial operators FireCaddy® systems quickly suppress wood, engine and fuel fires, reduce toxic smoke, fumes, and temperatures, while preventing combustibles from re-igniting.

*When you first detect a fire, call for help. Ensure your safety – and that of others. When those seconds count – you can make a difference. Before outside help arrives – take control with a FireCaddy® fire suppression solution.*
