

When Fire Threatens
and Seconds Count,
Take Control

Forestry & Logging

All-round protection.

The impact to your operations when logging equipment is destroyed in a fire is only surpassed by the financial burden created by the loss of forest resources & property and the cost to extinguish the fire. With governments ensuring that companies take responsibility for all collateral damage to wildlands caused by your operations, your total cost of fire can be enormous. FireCaddy® provides the frontline, rearguard and all-round protection needed to change the course of battle in the war against fire.

Mobile units move fast into battle.

Any of the FireCaddy® Gasoline / Diesel or DC powered units, mount on pickups, ATV's or trailers, providing more mobility, capacity and capability to cut off, contain and suppress fires, before they become wildland fires.

Protection on the job.

FireCaddy® Systems mounted on logging and forestry equipment provide instant fire fighting capability. FireCaddy® DC units are the solution for tire, fuel and engine fires and the wildland fires that they can create.

Sprinkler protection that covers your bases.

FireCaddy® Zone Protection. Be prepared with ground and roof systems that provide optimal coverage for structures, property and equipment. Establish your defensive lines and pre-treat assets with FlameOut® to help protect from embers and heat, prevent ignition and stop fire dead in its tracks.

FireCaddy® Zone Protection
Sprinkler Systems

Zone structural protection systems

Water or foam/water suppression

Fast deployment

Pre-treat structures & combustibles

Portable Fire Protection that Re-Defines First Response Firefighting.
Industrial Operations, Remote Locations, Work Camps, Agricultural Operations,

Minimal Maintenance

Portable & Powerful
